

C Piscine
Day 07

Staff 42 pedago@42.fr

Abstract: This document is the subject for Day07 of the C Piscine @ 42.

Contents

1	THSU UCCIONS	2
II	Foreword	4
III	Exercise 00 : ft_strdup	6
IV	Exercise 01 : ft_range	7
\mathbf{V}	Exercise 02 : ft_ultimate_range	8
VI	Exercise 03 : ft_concat_params	9
VII	Exercise 04 : ft_split_whitespaces	10
VIII	Exercise 05 : ft_print_words_tables	11
IX	Exercise 06 : ft_convert_base	12
\mathbf{X}	Exercise 07: ft_split	13

Chapter I

Instructions

- Only this page will serve as reference: do not trust rumors.
- Watch out! This document could potentially change up to an hour before submission.
- Make sure you have the appropriate permissions on your files and directories.
- You have to follow the submission procedures for every exercise.
- Your exercises will be checked and graded by your fellow classmates.
- On top of that, your exercises will be checked and graded by a program called Moulinette.
- Moulinette is very meticulous and strict in its evaluation of your work. It is entirely automated and there is no way to negotiate with it. So if you want to avoid bad surprises, be as thorough as possible.
- Moulinette is not very open-minded. It won't try and understand your code if it doesn't respect the Norm. Moulinette relies on a program called Norminator to check if your files respect the norm. TL;DR: it would be idiotic to submit a piece of work that doesn't pass Norminator's check.
- These exercises are carefully laid out by order of difficulty from easiest to hardest. We will not take into account a successfully completed harder exercise if an easier one is not perfectly functional.
- Using a forbidden function is considered cheating. Cheaters get -42, and this grade is non-negotiable.
- If ft_putchar() is an authorized function, we will compile your code with our ft_putchar.c.
- You'll only have to submit a main() function if we ask for a program.

- Moulinette compiles with these flags: -Wall -Wextra -Werror, and uses gcc.
- If your program doesn't compile, you'll get 0.
- You <u>cannot</u> leave <u>any</u> additional file in your directory than those specified in the subject.
- Got a question? Ask your peer on your right. Otherwise, try your peer on your left.
- Your reference guide is called Google / man / the Internet /
- Check out the "C Piscine" part of the forum on the intranet.
- Examine the examples thoroughly. They could very well call for details that are not explicitly mentioned in the subject...
- By Odin, by Thor! Use your brain!!!

Norminator must be launched with the $\mbox{-R CheckForbiddenSourceHeader}$ flag. Moulinette will use it too.

Chapter II

Foreword

Morty: Rick!

Rick: Uhp-uhp-uhp! Morty, keep your hands off your ding-dong! It's the only way we can speak freely. Look around you, Morty. Do you really think this wuh-world is real? You'd have to be an idiot not to notice all the sloppy details. Look, that guy's putting a bun between two hot dogs.

Morty: I dunno, Rick, I mean, I've seen people do that before.

Rick: Well, look at that old lady. She's-she's walking a cat on a leash.

Morty: Uh, Mrs. Spencer does that all the time, Rick.

Rick: Look, I-I-I don't want to hear about Mrs. Spencer, Morty! She's an idiot! All right, all right, there. Wh-what about that, Morty?

Morty: Okay, okay, you got me on that one.

Rick: Oh, really, Morty? Are you sure you haven't seen that somewhere in real life before?

Morty: No, no, I haven't seen that. I mean, why would a Pop-Tart want to live inside a toaster, Rick? I mean, th-that would be like the scariest place for them to live. Y'know what I mean?

Rick: You're missing the point, Morty. Why would he drive a smaller toaster with wheels? I mean, does your car look like a smaller version of your house? No.

Morty: So, why are they doing this? W-what do they want?

Rick: Well, that would be obvious to you, Morty, if you'd been paying attention. [an ambulance drives past Rick and Morty and stops; open back doors]

Paramedic: We got the President of the United States in here! We need 10cc of concentrated dark matter, stat, or he'll die!

C Piscine

Day 07

Morty: Concentrated dark matter? They were asking about that in class.

Rick: Yeah, it's a special fuel I invented to travel through space faster than anybody else. These Zigerions are always trying to scam me out of my secrets, but they made a big mistake this time, Morty. They dragged you into this. Now they're gonna pay!

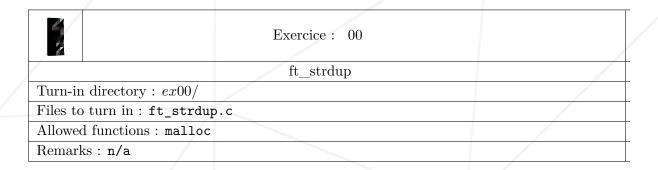

Morty: What do you- w-w-what are we gonna do?

Rick: We're gonna scam the scammers, Morty. And we're gonna take 'em for everything they've got.

The following exercices will be easier to complete if you are a fan of "Rick and Morty"

Chapter III

Exercise 00: ft_strdup

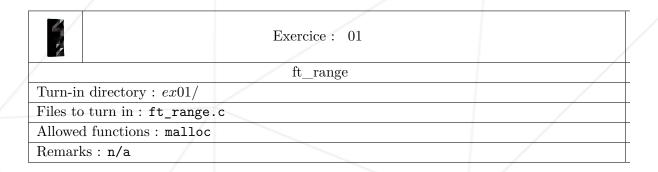

- Reproduce the behavior of the function strdup (man strdup).
- Here's how it should be prototyped :

char *ft_strdup(char *src);

Chapter IV

Exercise 01: ft_range

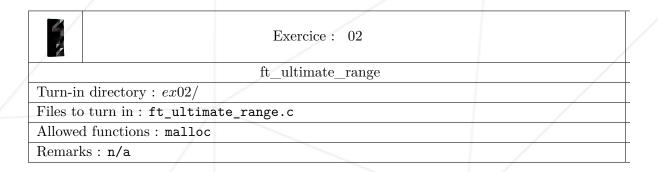

- Create a function ft_range which returns an array of ints. This int array should contain all values between min and max.
- Min included max excluded.
- Here's how it should be prototyped :

```
int *ft_range(int min, int max);
```

• If minvalue is greater or equal to max's value, a null pointer should be returned.

Chapter V

Exercise 02: ft_ultimate_range

- Create a function ft_ultimate_range which allocates and assigns an array of ints. This int array should contain all values between min and max.
- Min included max excluded.
- Here's how it should be prototyped:

```
int ft_ultimate_range(int **range, int min, int max);
```

- If the value of min is greater or equal to max's value, range will point on NULL.
- The size of range should be returned (or 0 on error).

Chapter VI

Exercise 03: ft_concat_params

	Exercice: 03	
/	ft_concat_params	
Turn-in directory: ex03/		
Files to turn in: ft_concat_params.c		
Allowed functions: malloc		
Remarks : n/a		
. /		

- \bullet Create a function that transforms arguments given as command-line into a single string of characters. Those arguments should be separated by a "\n".
- Here's how it should be prototyped :

char *ft_concat_params(int argc, char **argv);

Chapter VII

Exercise 04: ft_split_whitespaces

- Create a function that splits a string of characters into words.
- Separators are spaces, tabs and line breaks.
- This function returns an array where each box contains a character-string's address represented by a word. The last element of this array should be equal to 0 to emphasise the end of the array.
- There can't be any empty strings in your array. Draw the necessary conclusions.
- The given string can't be modified.
- Here's how it should be prototyped:

char **ft_split_whitespaces(char *str);

Chapter VIII

Exercise 05: ft_print_words_tables

Exercice: 05

ft_print_words_tables

Turn-in directory: ex05/

Files to turn in: ft_print_words_tables.c

Allowed functions: ft_putchar

Remarks: n/a

- Create a function that displays the content of the array you created in the last excercise's function.
- One word per line.
- Each word will be followed by a "\n", including the last one.
- This exercise will be compiled with your ft_split_whitespaces.c
- Watch out not to have multiple define.
- Here's how it should be prototyped :

void ft_print_words_tables(char **tab);

Chapter IX

Exercise 06: ft_convert_base

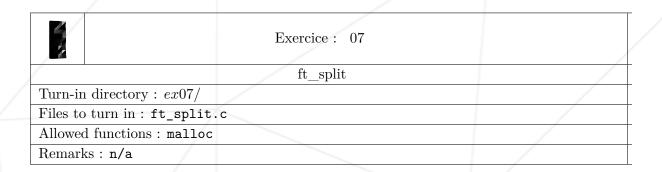

Exercice: 06	
ft_convert_base	/
Turn-in directory : $ex06/$	
Files to turn in: ft_convert_base.c	
Allowed functions: malloc, free	
Remarks: n/a	

- Create a function that returns the result of the conversion of the string nbr from a base base_from to a base base_to. The string must have enough allocated memory. The number represented by nbr must fit inside an int.
- Here's how it should be prototyped :

char *ft_convert_base(char *nbr, char *base_from, char *base_to);

Chapter X

Exercise 07: ft_split

- Create a function that slits a string of character depending on another string of characters.
- You'll have to use each character from the string charset as a separator.
- The function returns an array where each box contains the address of a string wrapped between two separators. The last element of that array should equal to 0 to indicate the end of the array.
- There cannot be any empty strings in your array. Draw your conclusions accordingly.
- The string given as argument won't be modifiable.
- Here's how it should be prototyped :

char **ft_split(char *str, char *charset);
